# Exclusive Purchasing Collective

“A clear way to purchase your electricity”

The Electricity Exclusive Purchasing Collective takes a structured and proactive approach to managing all aspects of your energy costs, providing you with the benefits that large industrial customers enjoy.

By combining your energy requirements with like-minded businesses, you can now avoid the risks that most fixed price energy contracts present, while being comforted by transparent end-to-end processes.

## Why choose this product?

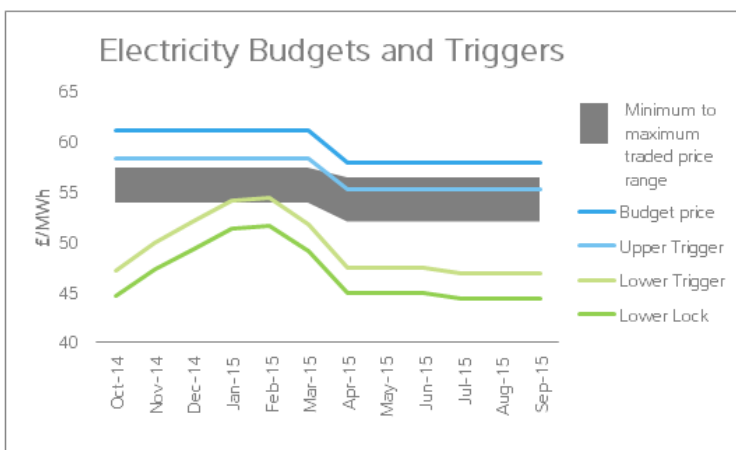

Two billing and procurement options:

**Fixed Strategy** – Procurement of your electricity before your contract begins providing you with fixed price certainty without the usual premiums.

**Flexible Strategy** – Within contract procurement, providing you more opportunities for cheaper prices like traditional flexible contracts.

- **Green Energy Contracts** – Meet your carbon commitment by buying renewable energy at no extra cost.
- **Reduced Energy Cost Opportunity** – Take advantage of price dips and avoid spikes in the market.
- **Cheaper Contracts** – Avoid inflated risk premiums built into fixed price contracts.
- **Collective Volume Protection** – Take advantage of combining your volume to minimise exposure to take or pay charges.
- **No Cross Subsidisations** – All energy components are priced per customer contract not averaged across the portfolio.
- **Hassle Free** – CUB will manage all the administration on your behalf.
- **Opt Out at Any Time** – All businesses that enter the collective can make the decision at any time to opt out onto a fixed term contract.

Combining customer's energy consumption into the Electricity EPC, provides CUB (K) with purchasing power and opportunity to lower energy costs across the collective group.

you from the risk of locking in all your energy at the higher end of the market.

## Requirements:

In order to have access to the EPC product your annual electricity consumption must exceed 1,000,000 kWh and must be metered by Half Hourly capable metering.

The chart (shown in Figure) shows the range (min-max) of prices that were traded on the wholesale electricity market. Over the past 5 years electricity prices have varied by up to 50%, depending on which contracts were purchased.

Using a set procurement strategy CUB (UK) will build up your contract price over a period of time to ensure you are taking advantage of the lower prices, protecting
