

# Energy Live News PowerRide

The staff at Energy Live News have been doing their bit for charity and the energy industry by taking part in a power bike ride. They planned route from the Tate Modern in London to the Drax Power Station near York.

During their 380 mile bike ride they had planned a few stops, one of them being at CUB (UK) based in March. Even though they were raising money for Parkinsons UK they were also raising awareness of exciting areas in the energy industry. They came to talk to us about energy efficiency and energy management amongst business users.

We had a lovely buffet waiting for them and a nice cuppa so they could unwind and relax for a while. We had a great time with them and wished they could have stayed longer to have a proper catch up.

It was fantastic to have them in the office and hope they raise enough to hit their £10,000 target.
